In computing, cross-platform software (also multi-platform software or platform-independent software) is computer software that is implemented on multiple computing platforms. Cross-platform software may be divided into two types; one requires individual building or compilation for each platform that it supports, and the other one can be directly run on any platform without special preparation ...

### **Cross-platform software - Wikipedia**

A cross compiler is a compiler capable of creating executable code for a platform other than the one on which the compiler is running. For example, a compiler that runs on a Windows 7 PC but generates code that runs on Android smartphone is a cross compiler.. A cross compiler is necessary to compile code for multiple platforms from one development host. Direct compilation on the target ...

Building and Distributing Packages with Setuptools . Setuptools is a collection of enhancements to the Python distutils that allow developers to more easily build and distribute Python packages, especially ones that have dependencies on other packages.. Packages built and distributed using setuptools look to the user like ordinary Python packages based on the distutils.
