Ohm's law states that the current through a conductor between two points is directly proportional to the voltage across the two points. Introducing the constant of proportionality, the resistance, one arrives at the usual mathematical equation that describes this relationship:  $I = V/R$ , where I is the current through the conductor in units of amperes, V is the voltage measured across the conductor in ...

These operators will â€œoperateâ€• on a wave function,  $Y$ , which is assumed to exist, and which is assumed to contain all that is knowable about the quantum mechanical system. We would then solve the resulting equation to get the particulars. And so, in this example, we can write the substitutions into the classical expression for total energy.
